SW **SmartWorker**

Design review

The app as built, in the approved design, and the corrections still suggested

10 November 2026 · branch `claude/keen-curie-wr54kr` · not yet live

2	32	5	42/42
batches approved and built (sign in · tabs, attendance, dates)	screens checked at phone size	corrections suggested (batch 3, for your OK)	automatic test scripts passing

How to read this

Before the app as it was when the audit began

Approved preview the mockup you said OK to

Built a screenshot of the real app now, on this branch

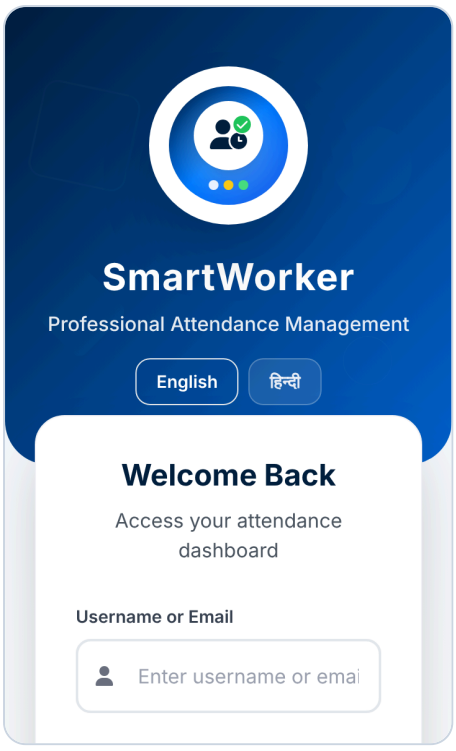

Suggested a correction I recommend, not built yet

Design rules used everywhere

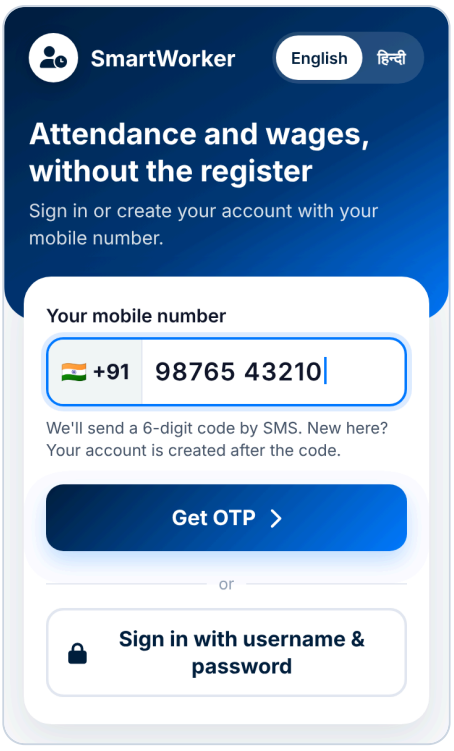

- Your brand is kept: navy #001F3F, blue #007BFF, the Inter font, the same icons.
- Every button at least 44–48 px, the size of a thumb; one main action per screen.
- Works at the phone's largest text size, on a small 320 px phone, and on tablets.
- Hindi on every screen; dates day-first (Tue, 10 Nov 2026); money in lakh grouping (₹1,25,000).
- Plain words: say what went wrong and what to do next ("3 tries left", not "Invalid").

Batch 1 — Sign in and sign up

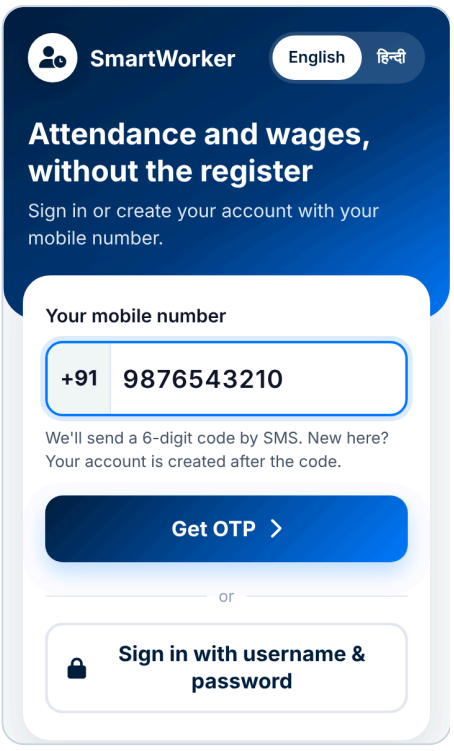

Approved and built. Until an SMS provider is connected, the live site shows the password version (next page); the OTP screens switch on by themselves once one is set.

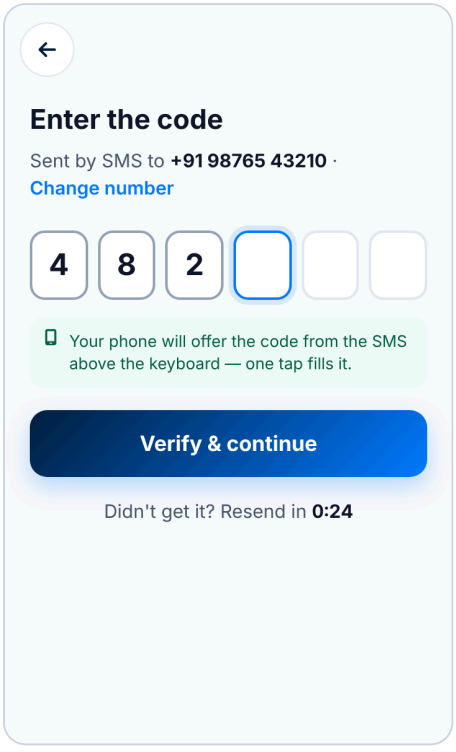

Before Sign in before: two forms, OTP that never arrived

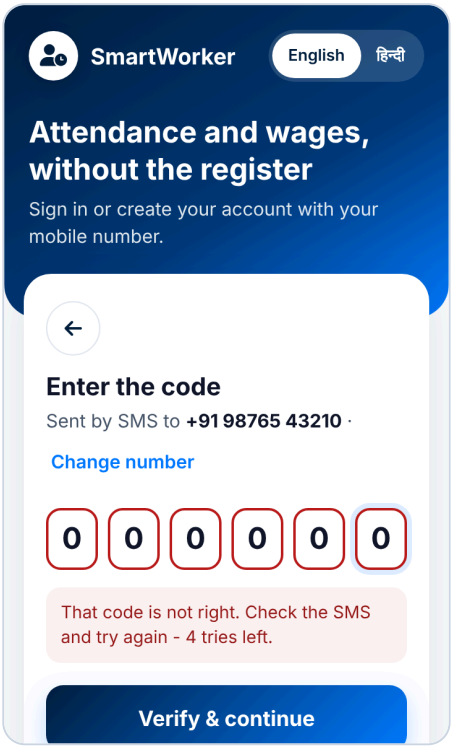

Approved preview One way in: the mobile number

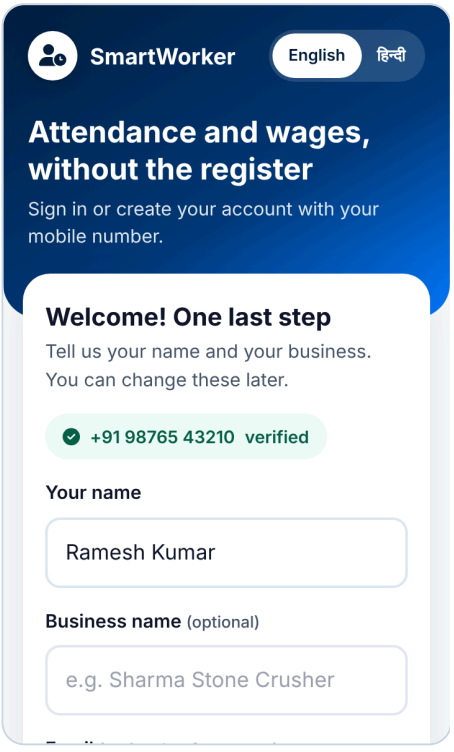

Built With SMS connected

Approved preview 6 boxes, SMS autofill, 30 s resend

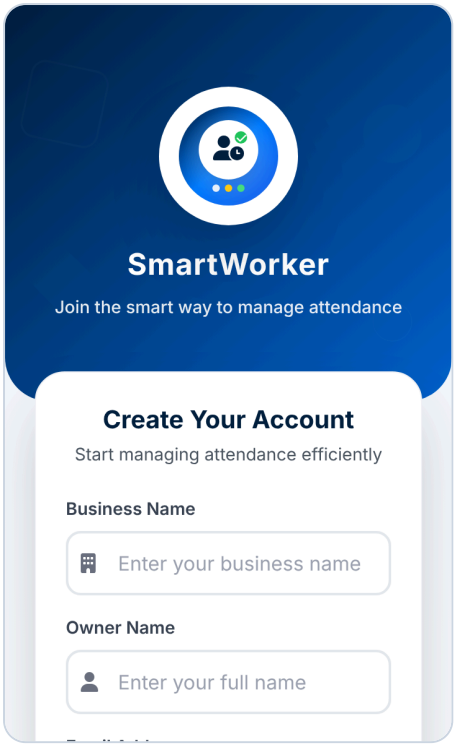

Built Wrong code says how many tries are left

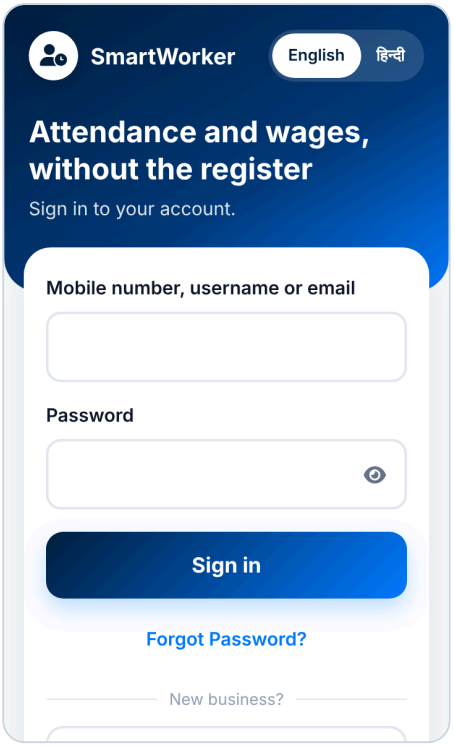

Built First time only: a name

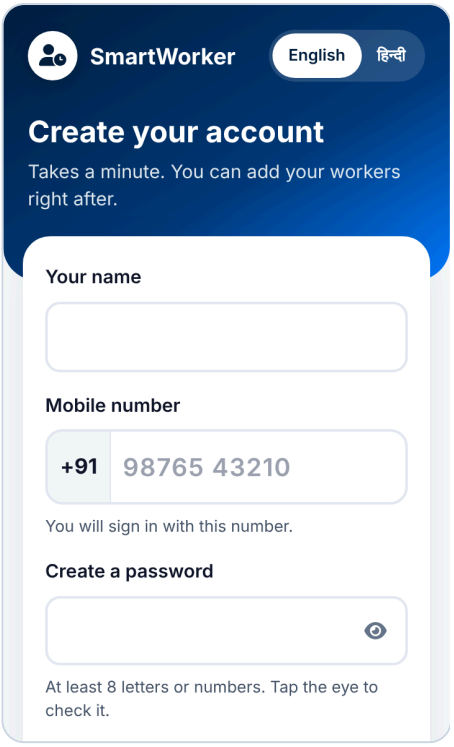

Batch 1 — as it works today

Before Sign-up before: 9 fields, email required

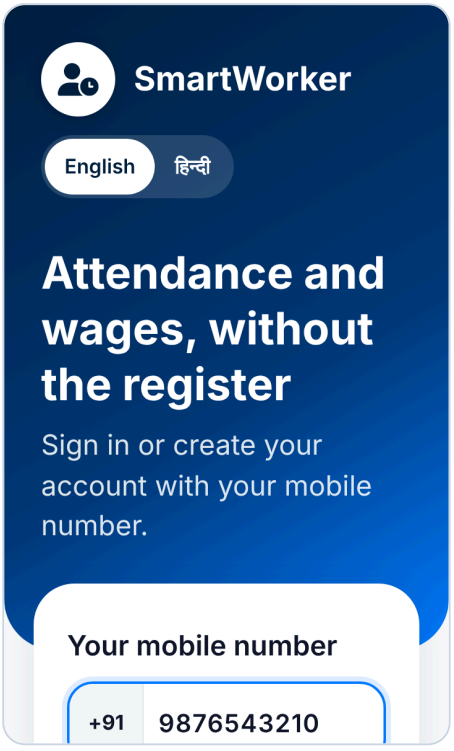

Built Today, no SMS: password first

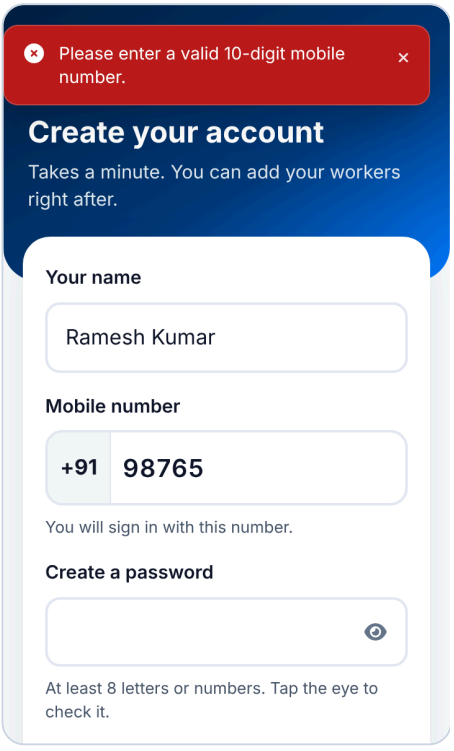

Built Sign-up now: 5 fields, 2 optional

Built Hindi

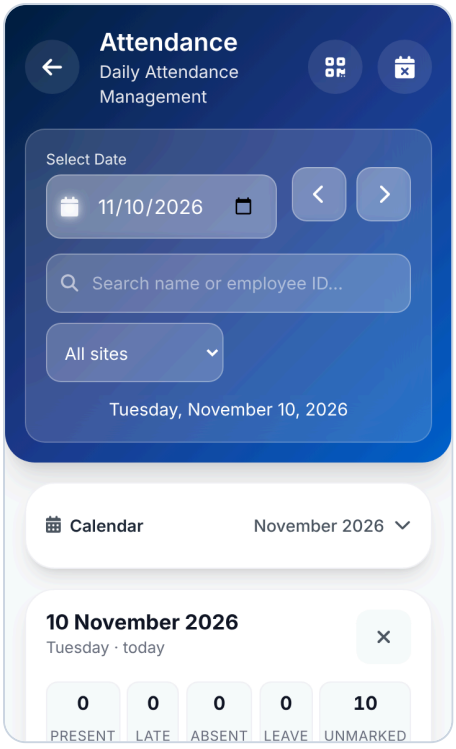

Built Largest text: nothing cut off

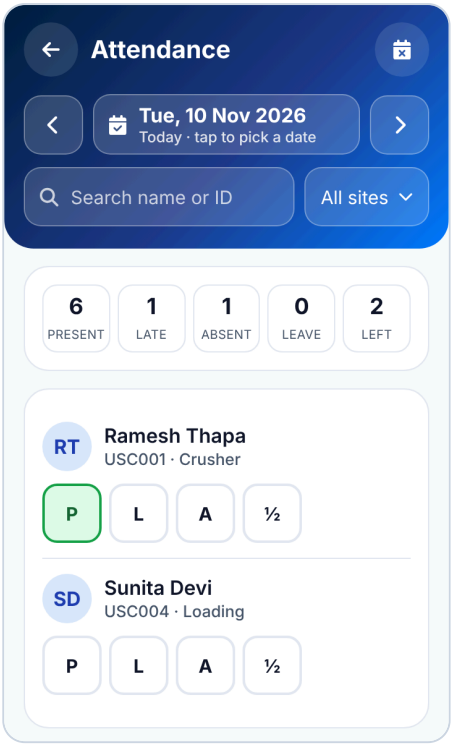

Built A mistake keeps what was typed

Batch 2 — Tabs, attendance, dates

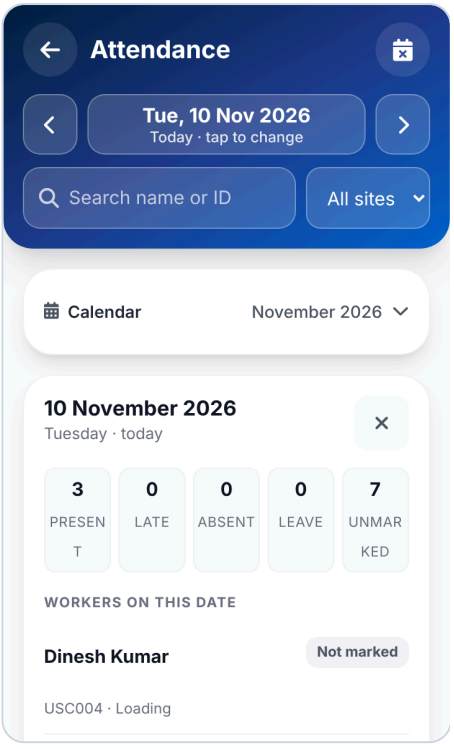

Approved and built. Profile left the tab bar for the round button at the top right of Home; Scan moved to the centre, where the thumb rests.

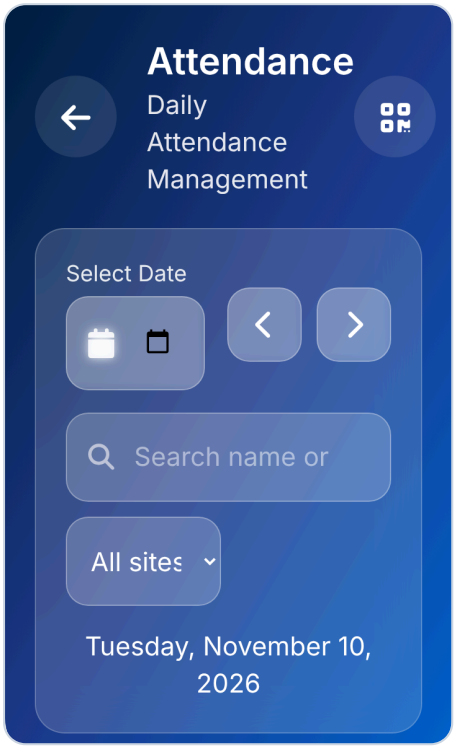

Before Before: 6 tabs of 35 px, header fills the screen

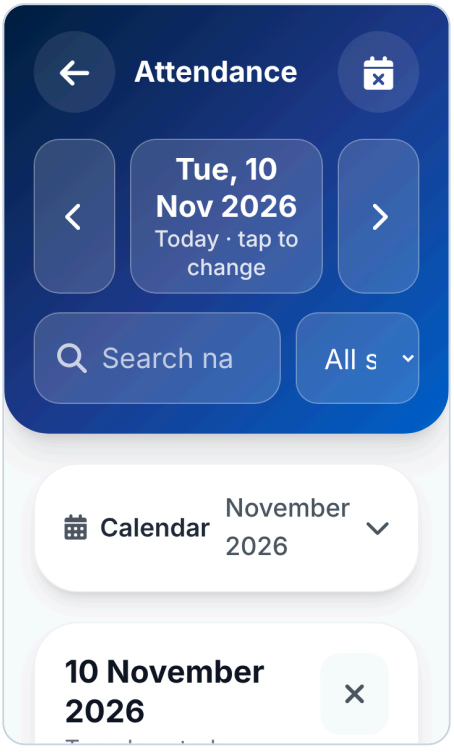

Approved preview 5 tabs, one date row

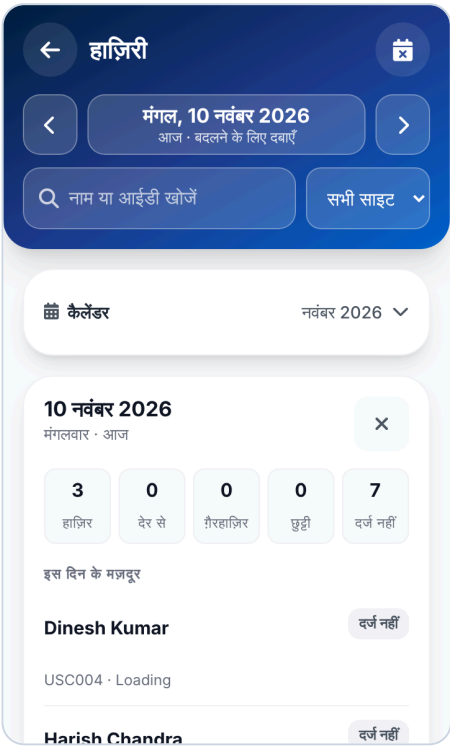

Built As built

Before Largest text before: "H...", "Wo...", no worker

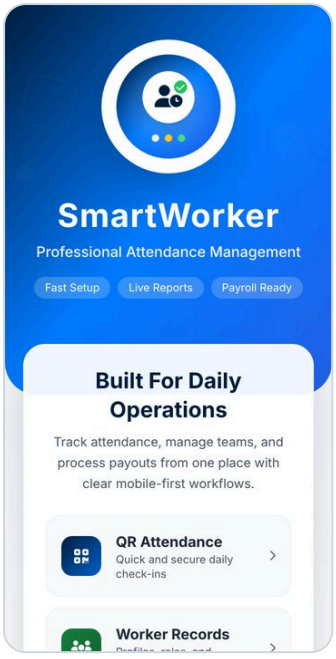

Built Largest text now: tabs readable, no sideways scroll

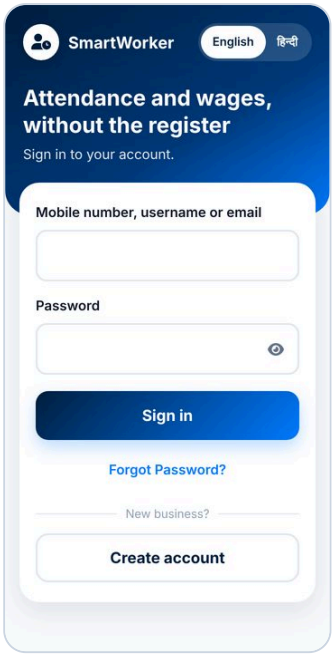

Built Hindi: मंगल, 10 नवंबर 2026

Every screen, as built

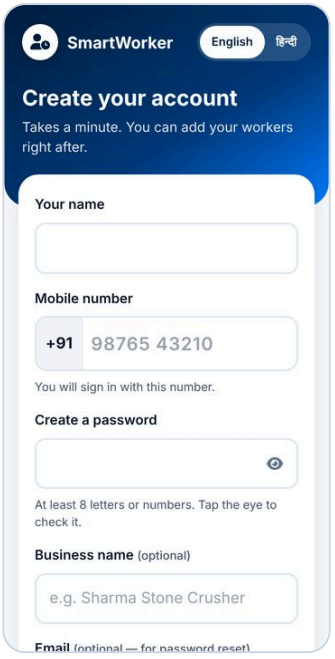

Real screenshots of this branch at 360 × 800, a common budget-phone size, with demo data.

Supervisor powers · Owner / admin

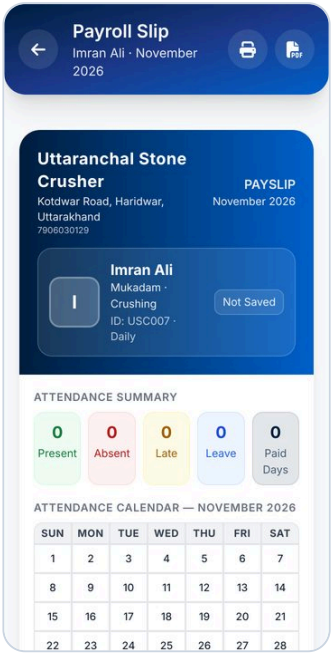

Worker home · Supervisor (mukadam)

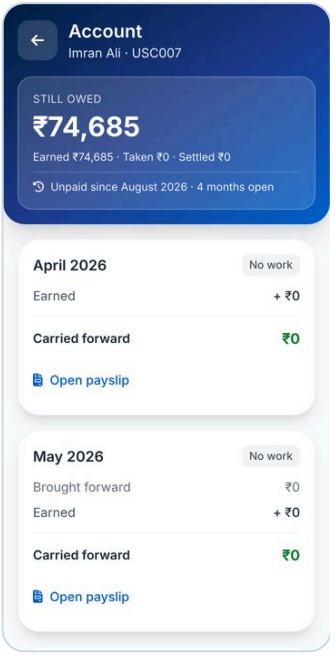

My team · Supervisor (mukadam)

Scan QR · Supervisor (mukadam)

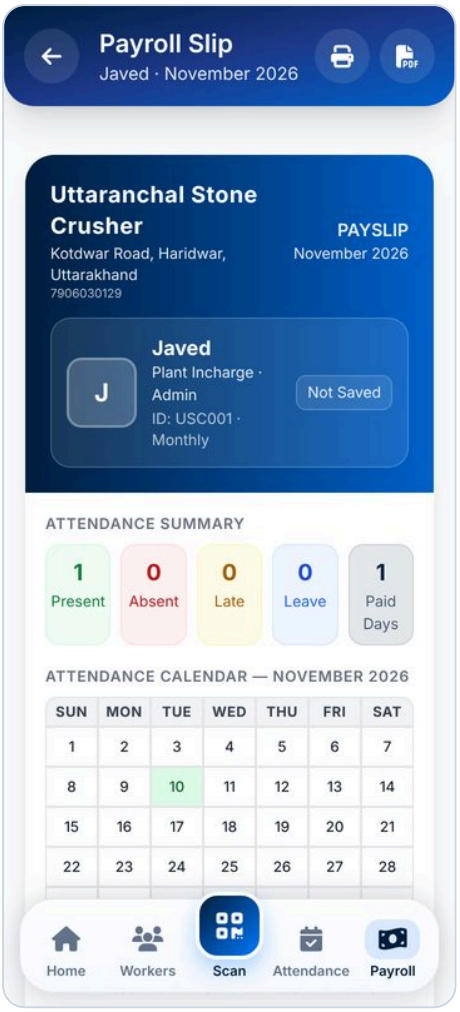

My payslip · Supervisor (mukadam)

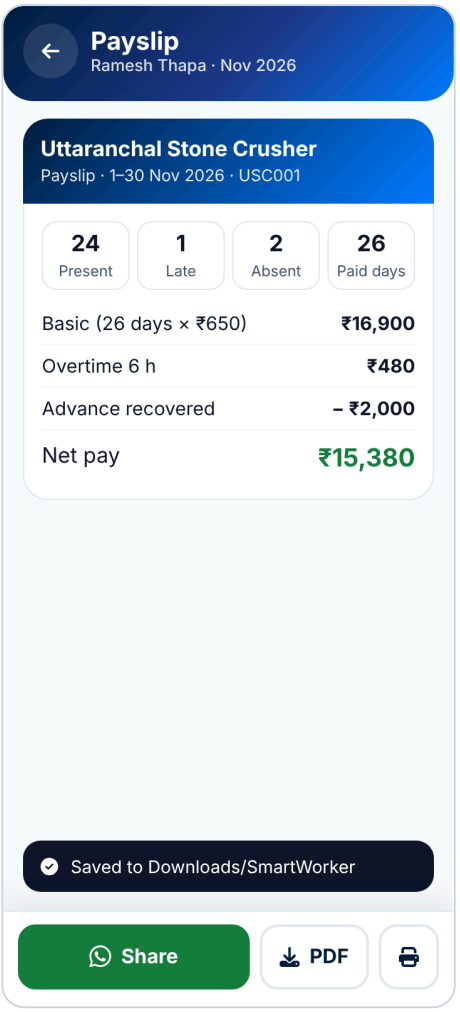

My account · Supervisor (mukadam)

S1 · Share a payslip on WhatsApp

Payslips travel by WhatsApp, but there is no Share button today, and the ID card's Share does not work inside the Android app. Suggested: a bar at the foot of the payslip with **Share** first, then Save PDF and Print, and a short "Saved to ..." note after saving. Needs the native file plugins (done this round) to share the real PDF.

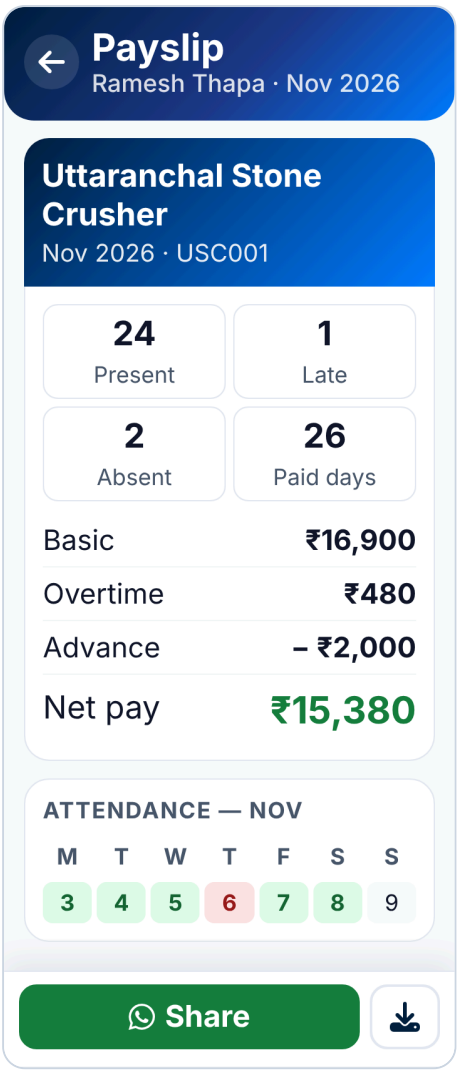

Before Payslip today: Save and Print hide in the header

Suggested Share leads, at thumb height

S2 · Payslip readable at the largest text

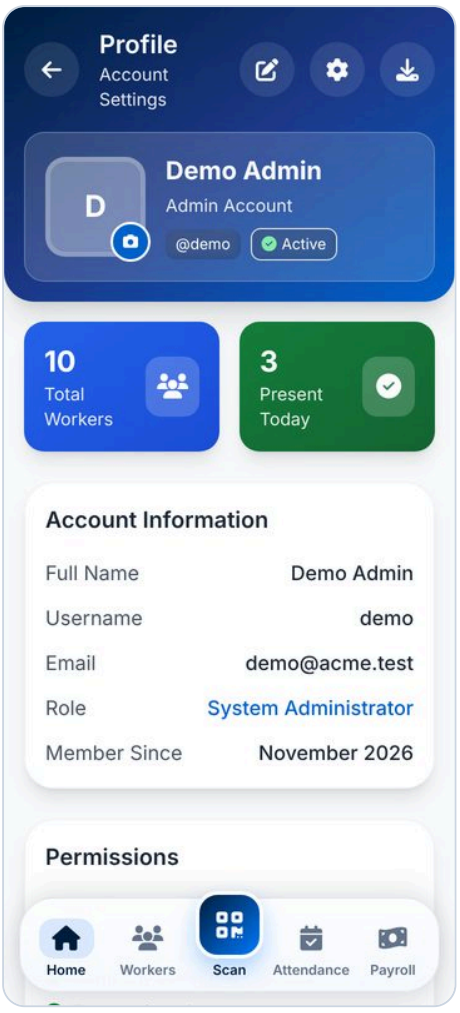

The payslip and ID card are laid out like an A4 sheet, so at the largest text they still scroll sideways (+72 px, +46 px). Suggested: on the phone, show the payslip as stacked rows (label left, amount right) with the month calendar compact below; keep the A4 layout for the PDF and printing.

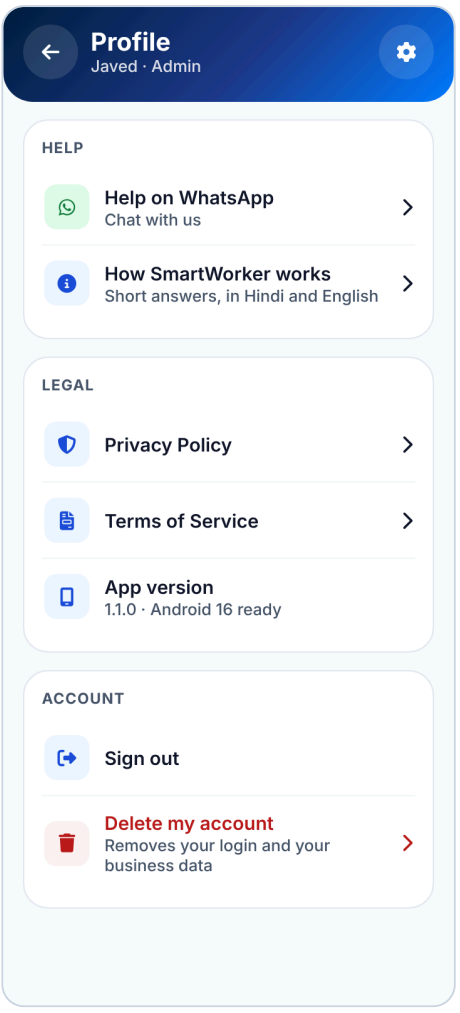

Suggested Stacked rows at the largest text

S3 · Help, legal and account in Profile

There is no help, no Privacy Policy or Terms (the sign-up links do nothing), and no way to delete an account. Google Play requires the policy link and account deletion. Suggested: three short groups at the foot of Profile. **Needs your details (D3)**: support WhatsApp number, policy text.

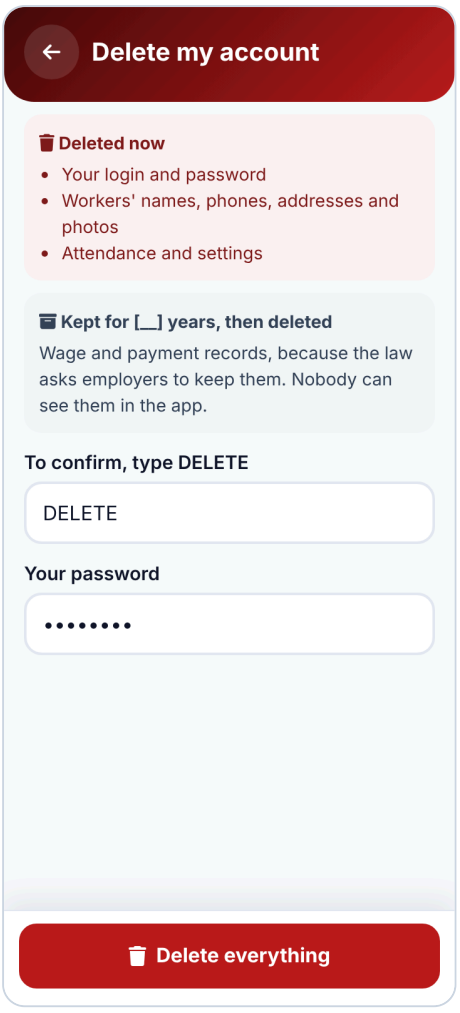

Before Profile today

Suggested Help · Legal · Account

S4 · Delete my account

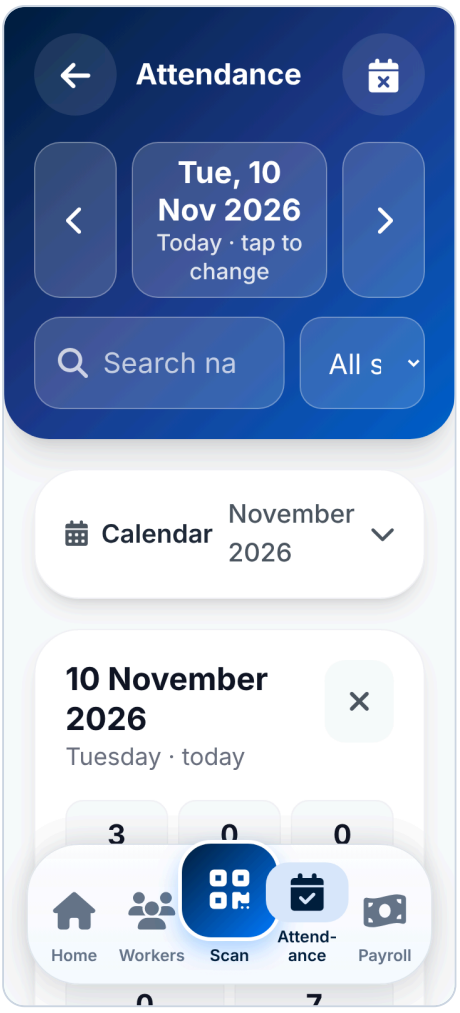

Says plainly what is deleted now and what must be kept by law, then asks for a typed DELETE and the password, so it cannot happen by accident. A web page with the same form is also required by Play. **Needs from you**: how many years wage records are kept (the [__] below).

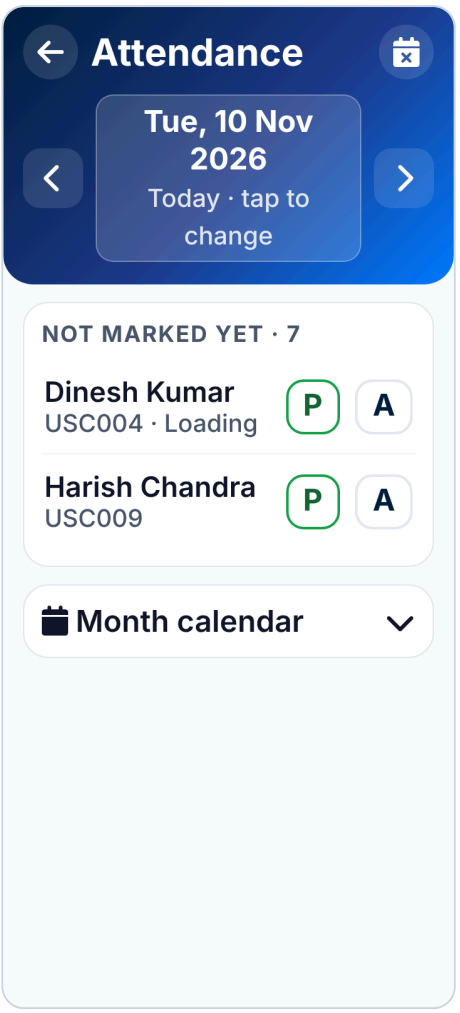

Suggested Clear before it is final

S5 · Attendance at the largest text: workers first

At the largest text the first worker is still one scroll down, because the month calendar and day summary sit above the list. Suggested: when a day is open, put the workers still to mark first, with large P / A buttons, and fold the calendar below them.

Built Now: calendar first

Suggested Workers first

What I need from you

#	Decision	My recommendation
OK	Batch 3 (S1–S5 above)	OK S1, S2, S5 now; S3 and S4 once D3 is answered
D1	SMS provider for OTP	MSG91 or 2Factor with TRAI DLT; sign-up already works without it
D2	The public repository held passwords and personal data	Make it private today, and change the live admin and supervisor passwords
D3	Privacy Policy, Terms, deletion rules	Send business name, contact, grievance officer, years wage records are kept
D4	Worker photos are in public storage	Make storage private (signed links)
D7	Render free plan sleeps (slow first open)	Paid plan, about $7/month, if used daily
D8	Play Store release	Create a release signing key and keep it safe forever

Please test on a real phone

Install the API 36 test APK (GitHub → Actions → latest *Build Android APK* run on this branch → Artifacts), open any payslip and tap **Save PDF**. That is the one big fix that could not be checked without a phone. The full list is in `docs/audit/MANUAL_TEST_CHECKLIST.md`.
